

Reducing & Transition Couplings

Style 62 Reducing coupling...

For connecting different sizes and types of pipe

Dresser Style 62 Reducing Couplings are ideal for (1) when making actual reductions in pipe size; (2) when changing the class of pipe; and (3) when joining steel and cast iron pipe. They can be supplied for connections between any two kinds or sizes of pipe.

Type I Reducing Couplings are for reductions where the differences in pipe diameters is small, as from standard cast iron to steel of the same nominal size. Standard Style 38 parts are used except the middle ring is swaged on one end.

Type II Reducing Couplings are for larger and special reductions outside the range of Type I. They are made from Style 38 parts with anchor rings welded to the middle ring. Two sets of bolts are supplied.

Style 162 Transition Couplings...

For joining pipe of different diameters

The Dresser Style 162 Transition Coupling permits you to connect two different kinds of pipe or sizes of pipe. You simply select the correct coupling for the pipe diameters being joined. The drawings at right illustrate how gaskets of different cross-sections adjust the coupling to your requirement. Further adjustment is accomplished with reducing middle-ring couplings.

Style 62 & 162 Materials of Construction

Followers: AISI C1012 or ASME SA36
(Ductile Iron or Malleable Iron for 1/2" thru 1-1/2")
Middle Ring: ASTM A513, ASTM A635 or ASME SA675 GR60
Bolts: AWWAC 111/ANSI A21.11

Style 62 and 162 Coupling Dimensions
(See Charts on Page 11)

Style 162 Coupling Features...

Larger gasket to accommodate smaller pipe

Adjustability with reducing middle ring
